To whom it may concern,

Due to the improper initial setup of my computer network, I was constantly having one computer problem after another. I had my server fail, leaving me without access to my dental software and digital radiography for over a week, and my computer system was on the verge of complete failure. With all of these problems, it was my good fortune to have met Mr. Bradford Armstrong, and to be introduced to Armstrong Professional Services, Inc.

Bradford did an incredible job restructuring our computer network the proper way. To find someone with his attention to detail, strive for perfection, trustworthiness, availability, work ethic, and professionalism is a rare occurrence these days. I was amazed that during the restructuring of my network, there was never a time that I did not have access to my dental software or digital radiography.

Bradford is well versed in the needs of the general dental practitioner. He introduced me to technology and ways of doing things that I never knew existed, which have been a tremendous benefit to the practice. I couldn't be happier with the data backup and protection that Armstrong Professional Services, Inc. has set up. After years of computer misery and worry, I can finally say that I no longer worry about my data being lost, or having constant computer problems. I highly recommend Bradford and Armstrong Professional Services for all of your computer needs.

Sincerely,

Dr. Scott D. Vlck
